

GAS LANCE BURNER

PGL 1-8 MW

The PGL burner was originally developed to meet high NOx emission requirements in outdated boilers. Originally designed for PTVM boilers. The PGL burner design has a remarkably low pressure drop over the air register.

The advantage of the PGL burner:

- Developed to meet very strict NOx emissions
- Proven for cost-effective heavy-duty industrial environment
- Few movable parts mean low maintenance costs
- Requires small mounting opening in boiler
- Simple to replace old existing burners
- Individually manufactured to customer specific requirements

PETRO BIO

DATA

Capacity between 1-8 MW
Several different models
Easy sustainable maintenance
Multifuel option

TYPICAL FUELS

Gaseous fuels: natural gas, LPG,
bio-gas, waste gas
